

## Abstract:

*This project focuses on developing a virtual cinema platform powered by IBM Cloud Video Streaming. By integrating cutting-edge technologies, intuitive user interfaces, and personalized experiences, the platform aims to revolutionize the way users interact with cinematic content online. From seamless video playback and interactive features to accessibility and security, the project strives to create a holistic, immersive, and user-centric virtual cinema experience. Through continuous feedback and iterative development, the platform aims to adapt to users' needs, ensuring a dynamic and engaging movie-watching environment for diverse audiences.*
